

Next year in the streets

In 1985 the City of Huntsville embarked upon a ten year bond program of rebuilding the entire street infrastructure the City owned at that time, approximately 85 centerline miles. It was a successful venture and at the end of that ten year period all of those streets had been rehabilitated. However, we grew in 1994 to approximately 120 centerline miles and something had to be done with the new infrastructure. The newly acquired streets needed some rehabilitation and the old needed preventative maintenance, and there were no plans for another bond issue.

The plan evolved into an annual priority list based on the bond issue streets incorporating the newly acquire infrastructure. Each year the list is reprioritized, if necessary, as to where and what needs to be done or not done. With the refined list we determine the funding necessary each year perform the needed maintenance.

As we come near the end of the second ten years of our program, there has been more growth as we now have almost 140 miles of streets in the City of Huntsville. Another evolution has to occur. We are now in the process of implementing a pavement management software program, MICROpaver. MICROpaver incorporates our existing inventory along with an extensive evaluation of our streets based on the surface conditions of the pavement. This tool along with further evaluation of the streets will allow us to continue with an orderly preventative maintenance program years into the future.

The following list indicates the streets that we plan to resurface in Fiscal Year 04-05:
